

Bluetooth Optical Mouse

Syncing your bluetooth mouse to your PC

1. Insert batteries into your Bluetooth mouse.
2. Power up the personal computer (PC).
3. On the PC, open up the control panel and find the Bluetooth Device Wizard. This will assist the user in setting up a Bluetooth connection between the PC and trusted devices.
4. Ensure the Bluetooth connectivity is turned on in the PC.
5. Choose to find and add a specific Bluetooth device.
6. Place the mouse or keyboard in pairing mode. Depending on the device, the user may be pushing a button on the device or the on/off switch in order to place the device in pairing mode.
7. As the PC discovers devices, it will inform the user which Bluetooth devices it has found.
8. From the list of devices discovered by the PC, choose the device that the user wishes to establish a trusted link with.
9. Initiate the pairing process to establish a connection.
10. A PIN code will be generated by the PC. The user will be prompted by the PC to enter in the PIN code.
11. If prompted on the PC to choose the Bluetooth services, for the keyboard or the mouse it will be Human Interface Device.
12. After completed, the user should click Finish.
